

LIASYS 330 USER INTERFACE

Intuitive and simple this graphic interface provides the operator with immediate system and operation update.

By graphically representing the key analyzer sections, the LIASYS 330 interface provides immediate feed-back by allowing "at a glance" update of all system operations.

This includes reagent levels and positions, samples positions, available results, time to test and work-list completion, remaining tests and durable cuvette status and all necessary information.

Color coded flags and icons, continuous loading sliding reagent and sample racks put you always in full control and make the LIASYS 330 a very convenient and easy to run system.
